Abstract:

In this paper we have created a website for management of a diving club membership list. All the internet technologies and tools necessary for such website have been researched and explained. We have researched how a computer must be configured in order to be used as a server of a modern web page. A local computer was configured so as to server as a server, and a remote server and domain were rented to make the application available to everyone online. Finally, the application itself was created using HTML, PHP and MySQL. In this paper all the components of said application have been described, and their algorithms explained. At the end of the development the database was filled in with test data and used in simulations of the actual management of a diving center. The application gave expected and satisfying results.

Keywords: Database management, Internet application development, Internet programming, Webpage design
